11.2 Additional Information

Methyl chloride is rapidly absorbed through the lungs and is excreted very slowly from the body. Symptoms of exposure include: dizziness, headache, weakness, unsteady walk, nausea, vomiting, abdominal pain, extreme nervousness, mental confusion, tremors, convulsions, unconsciousness and death, damage to the central nervous system. Apparent recovery from a seemingly minor exposure via inhalation may be followed by serious and prolonged aftereffects within a few days or weeks which can be fatal. Repeated exposures to methyl chloride are dangerous because it is eliminated very slowly from the body which converts methyl chloride into hydrochloric acid and methyl alcohol.
