12.2 Persistence and degradability

In river bottom soil of pH 8, the free amine decomposed rapidly and the major identified degradation products were m- formaminophenyl-N-methylcarbamate, m-formaminophenol, and m- aminophenol(1). In soil, the free amine concentration decreased from 53.7% at 1 day to 10.4% after 16 days(1).

12.3 Bioaccumulative potential

Based upon an experimental water solubility of 500,000 mg/l(1), the BCF of formetanate hydrochloride can be estimated to be approximately 0.38 from a regression-derived equation(2). According to this BCF value, bioconcentration in aquatic organisms is not expected to be an important fate process(SRC).

12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indexes, the Koc for formetanate hydrochloride can be estimated to be about 212(1). The Koc for formetanate hydrochloride can be estimated to be about 3.2 based on an experimental water solubility of 500,000 mg/L(3) and a regression derived equation(2). According to a suggested classification scheme(4), these estimated Koc values suggest that formetanate hydrochloride soil mobility is medium to very high. In a thin-layer chromatography study of the fungicide in Hagerstown silty clay loam soils, formetanate hydrochloride had Rf factors of 0.75 and 0.79(5,6). According to a suggested classification scheme(7), these Rf factors suggest that formetanate hydrochloride would be mobile in soil.

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
